Introduction

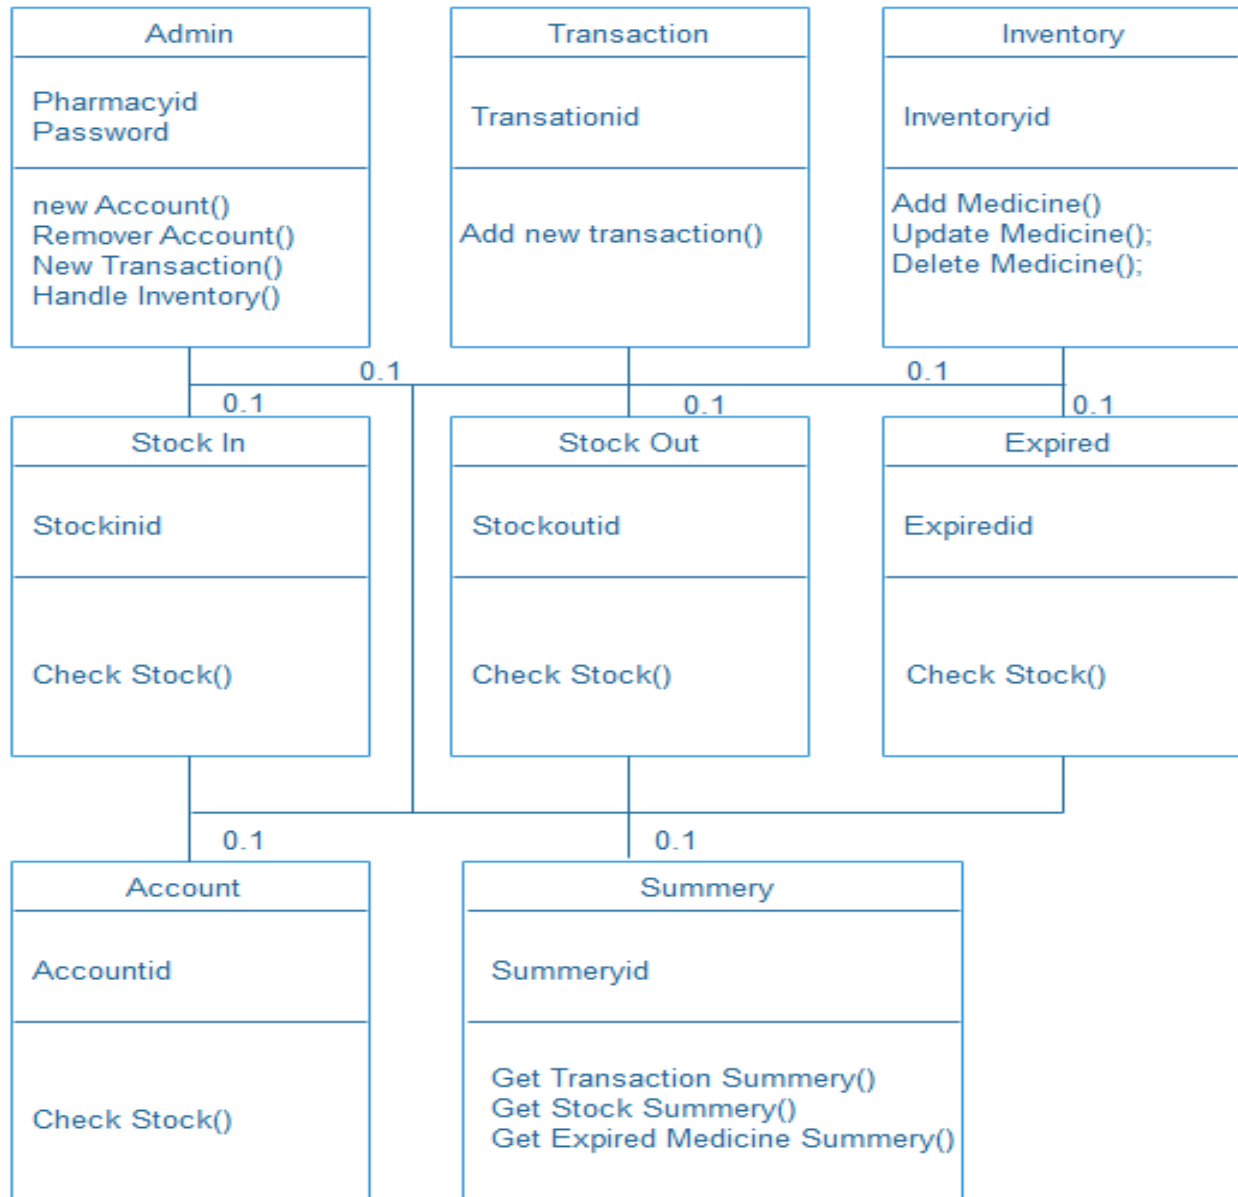

Care + is a virtual pharmacy. It is a little bit larger, and several workers work there. Currently all the data such as medicines, employee details are stored in a manual database. As the result of this the employees who work care+ have to face so many difficulties. Such as, Difficult to update current stock, difficult to find medicine information, need more physical space for store data, has to protect books from insects . Because of these reasons employees request for purchase an automated system to do these works more efficiency. So, owner of care+ Mr.David hand over this project for us. Still, we are undergraduate students of NSBM Green University and our group members accepted to do this with 1 month time period. To do this we choose C# language under C#.Net framework. At the same time we choose Microsoft SQL for attaching backend database with this application. The main Purpose of this application is increasing the efficiency of pharmacy and save time. The application which is made by us can handling all the transaction, getting details about stock in, stockout and expired drugs and manipulate entire process until sold something for customer. This application helps to handle all the things which are related to the Care+ Pharmacy. We hope all problems will be sorted because of this application.

Planning

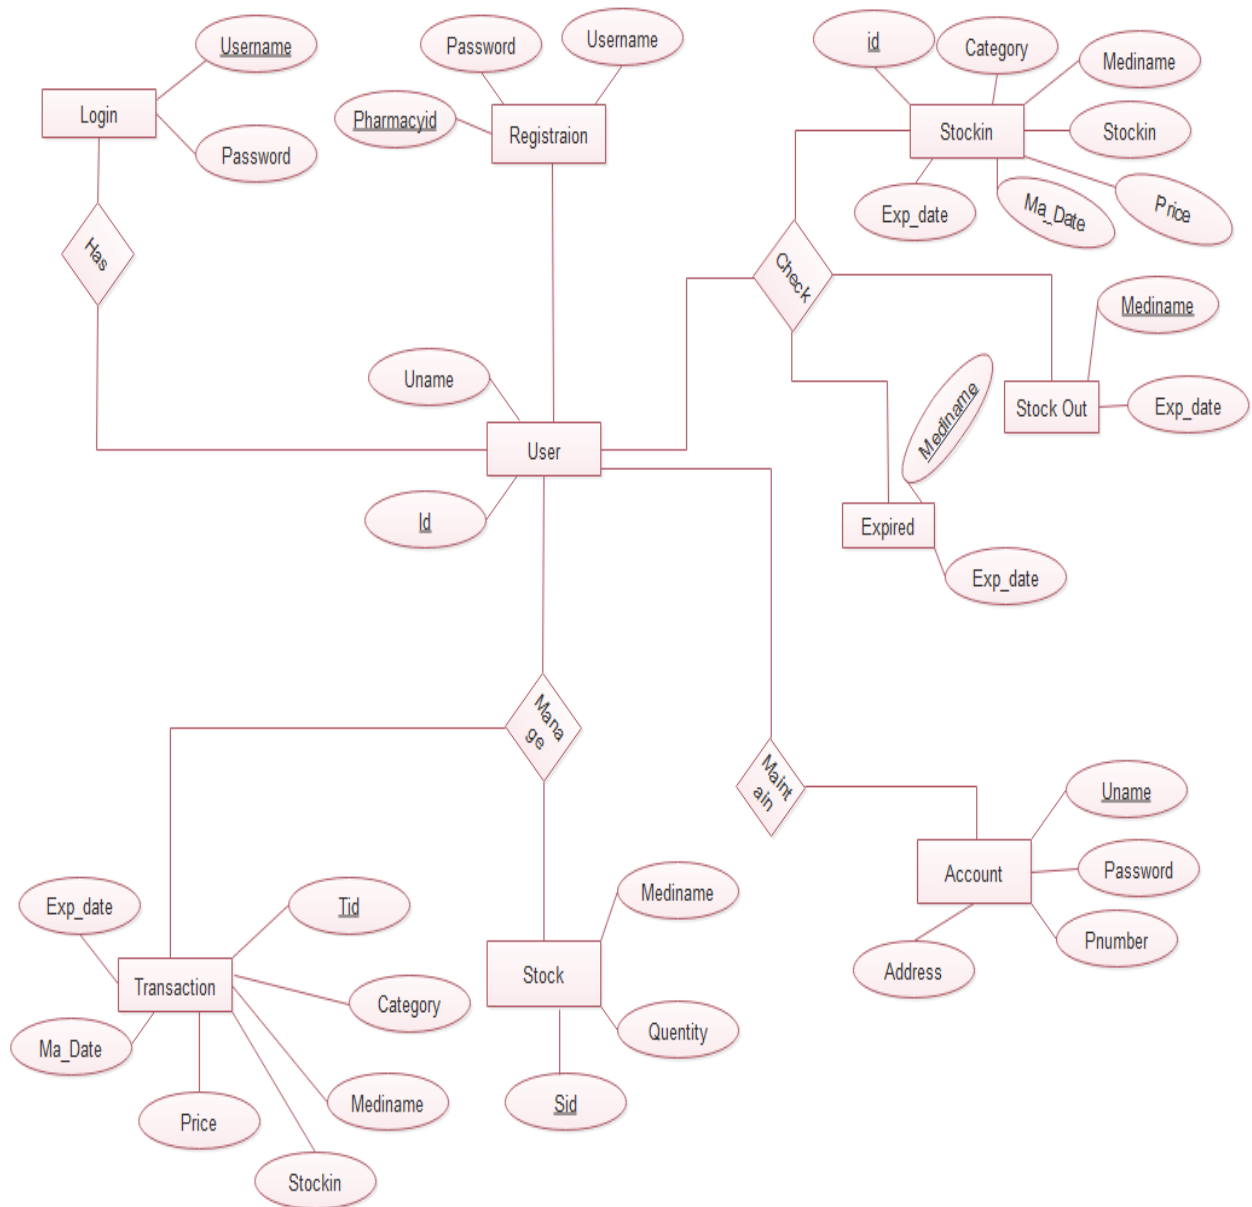

Before beginning the project, our team discuss with the owner of Care+ and some of employees of Care+. Here we follow data gathering techniques such as interviews and questionnaires. Mainly we gather data using interviews. Here we interview two employees individually and collect data. According to requirements of Care+ we built ER-Diagram. In the beginning we don't have completed idea about flow of this application. Since time by time all the members of our team gave their suggestion to complete diagram.

In here mainly we focused about starting forms of application. So, we add login form for accessing application. Once the user enters correct credential then he/she redirects into dashboard form. In there user can add account, remover account, do transactions, check stock, handle stock and more. Further all the things which are related to the Care+ stored in backend database. Once user do some changes then those things will appear on related database.

Use-Case Diagram

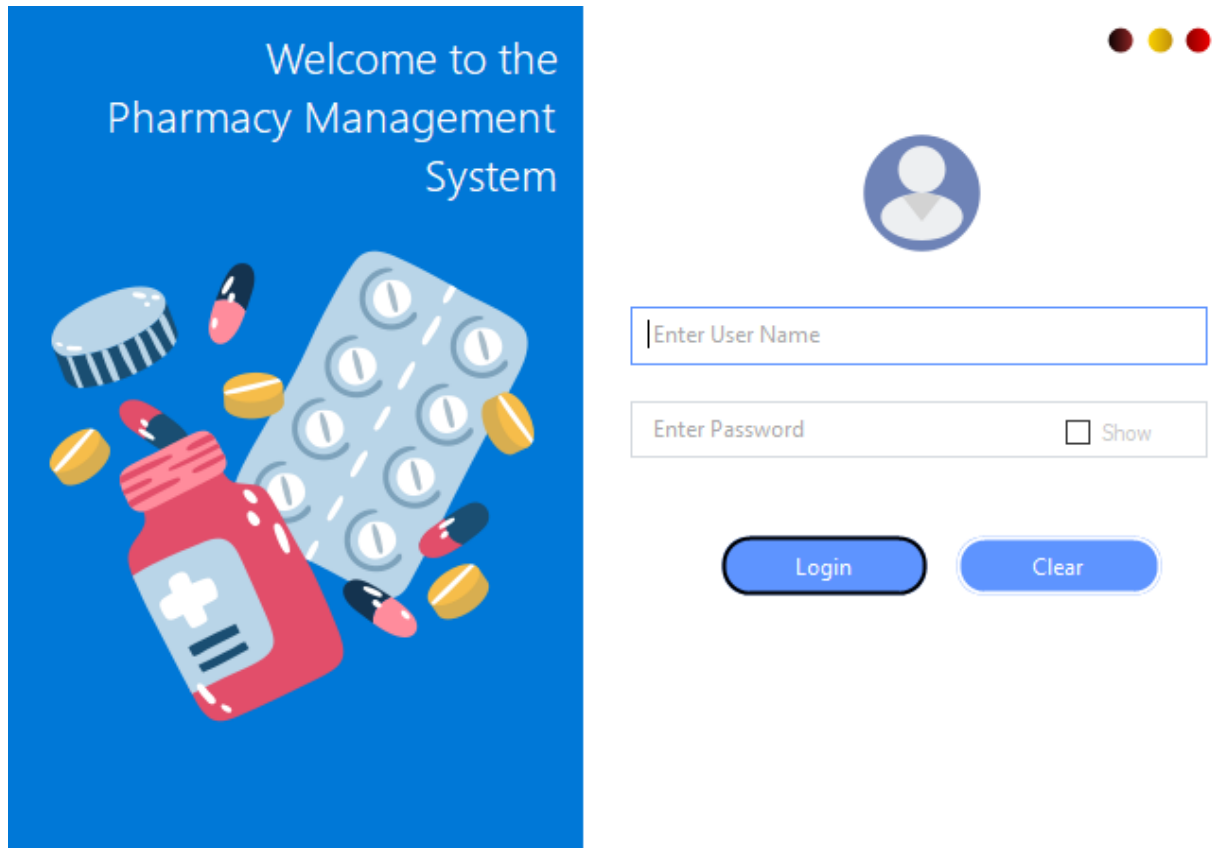

Loading Form

- Above Form is the loading form of Care+ Pharmacy Management System.
- Here We used Guna Framework for adding circle progress bar.
- Once the completed progress bar it redirects into login form.

Login Form

Welcome to the
Pharmacy Management
System

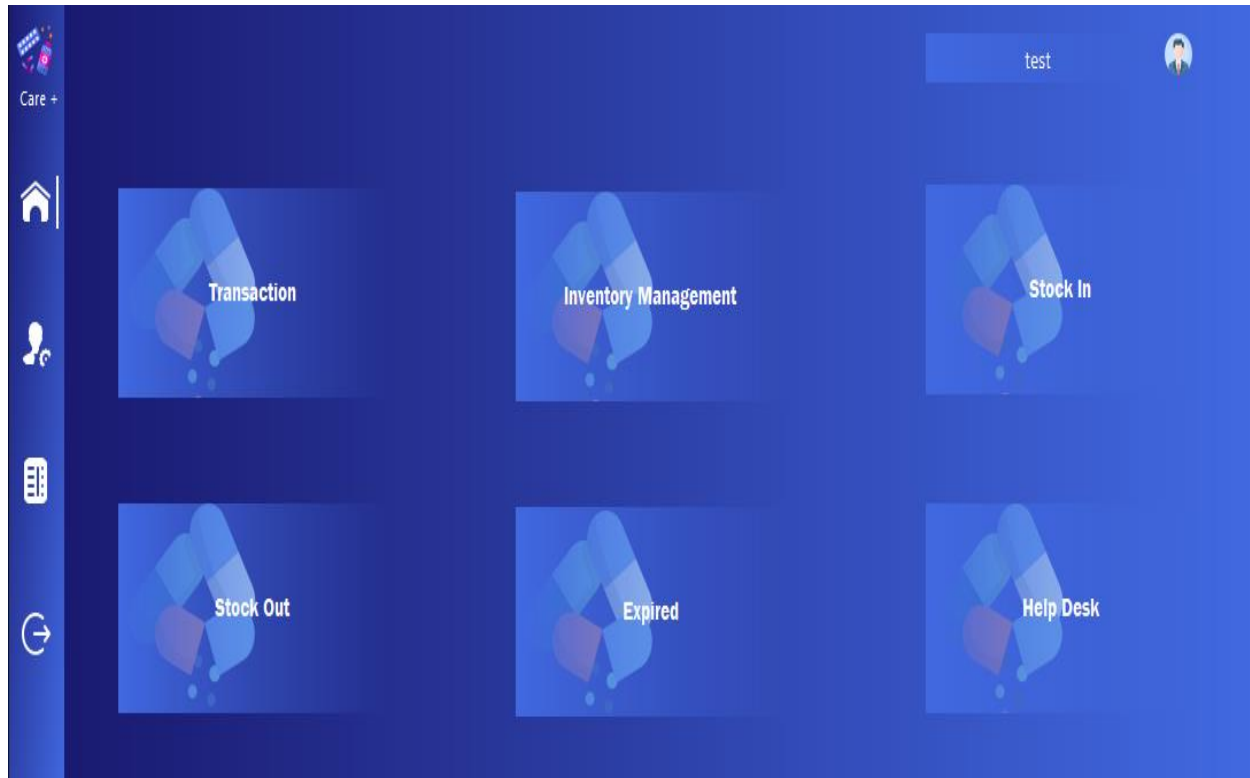

☐ Show

The login form is displayed on a light gray background. On the left, there is a blue rectangular banner with the text 'Welcome to the Pharmacy Management System' in white. Below the text is an illustration of various pharmaceutical items: a red pill bottle with a white cross, a blue pill bottle cap, several yellow and red capsules, and a blister pack of white round tablets. On the right side of the form, there is a user icon (a blue circle with a white person silhouette). Below the icon are two input fields: 'Enter User Name' and 'Enter Password'. The password field has a 'Show' checkbox to its right. At the bottom of the form are two blue buttons: 'Login' and 'Clear'.

- Once user enters the username and password then system check whether it matches with database credentials.
- If it is match with database table credentials, login form redirects into dashboard. Otherwise, it will Show Error message.

Dashboard

- This is dashboard form of Care+ pharmacy Management System. Here user can handle entire system.
- Transaction is the button which helps to do all the transaction.
- Inventory Management is button which helps to add, update, delete stock.
- Stock in uses to check all the stock which is currently use.
- Stock out uses to check all the stock which is out from stock.
- Expired uses to check all the stock which is already expired.
- Help desk helps to contact who develop the system.
- In side panel there is home button, account button, summery button and exit button

Account Setting Form

The screenshot displays a web application window titled "Account Setting". On the left, a vertical blue sidebar contains icons for "Care +", home, user profile, a list, and a refresh button. The main content area is divided into two panels by a vertical blue line. The left panel, titled "Add User", features three input fields labeled "Pharmacy Id", "Name", and "Password", each followed by a blue button: "Add" for Pharmacy Id, "Clear" for Name, and "Clear" for Password. The right panel, titled "Remove User", has a single "Pharmacy Id" input field followed by "Remove" and "Clear" buttons. The background of the form area is decorated with a colorful illustration of various pills and a red medicine bottle.

- This form helps to create new user account and removed unused accounts.

Update

Clear

- This form helps to add, delete, update medicines. Once user do some changes in here it will appear below table.

Stock In Form

Generic_name	Brand_name	Pack_size	Quantity
ALUMINIUM +MAGNESIUM	GASTRIL-LEMON	25x10's	10
PARACETAMOL TABLETS 500MG	PANADOL	144	20
PARACETAMOL	PANADOL SYRUP	100ML	10
ACETAMINOPHEN ORAL SOLUTION 1...	RAPISOL SYRUP	100ML	20

- This Form Provides all the details about medicines which are currently in stock.

Stock Out Form

The screenshot shows a software window titled "Stock Out". On the left is a dark blue sidebar with icons for "Care +", a home icon, a person icon, a calendar icon, and a refresh icon. The main area has a light blue header bar with the title "Stock Out". Below the header is a grey section labeled "* Note". Underneath is a table with a blue header row containing four columns: "Generic_name", "Brand_name", "Pack_size", and "Quantity". The table body is currently empty.

Generic_name	Brand_name	Pack_size	Quantity
--------------	------------	-----------	----------

- This Form provides all the details about medicines which are running out from stock.

Expired Medicine Form

Brand_name	Remaining_Days
GASTRIL-LEMON	51
PANADOL	71
PANADOL SYRUP	313
RAPISOL SYRUP	1642

- Above Form provides remain days for expiring of medicines which are available in stock.

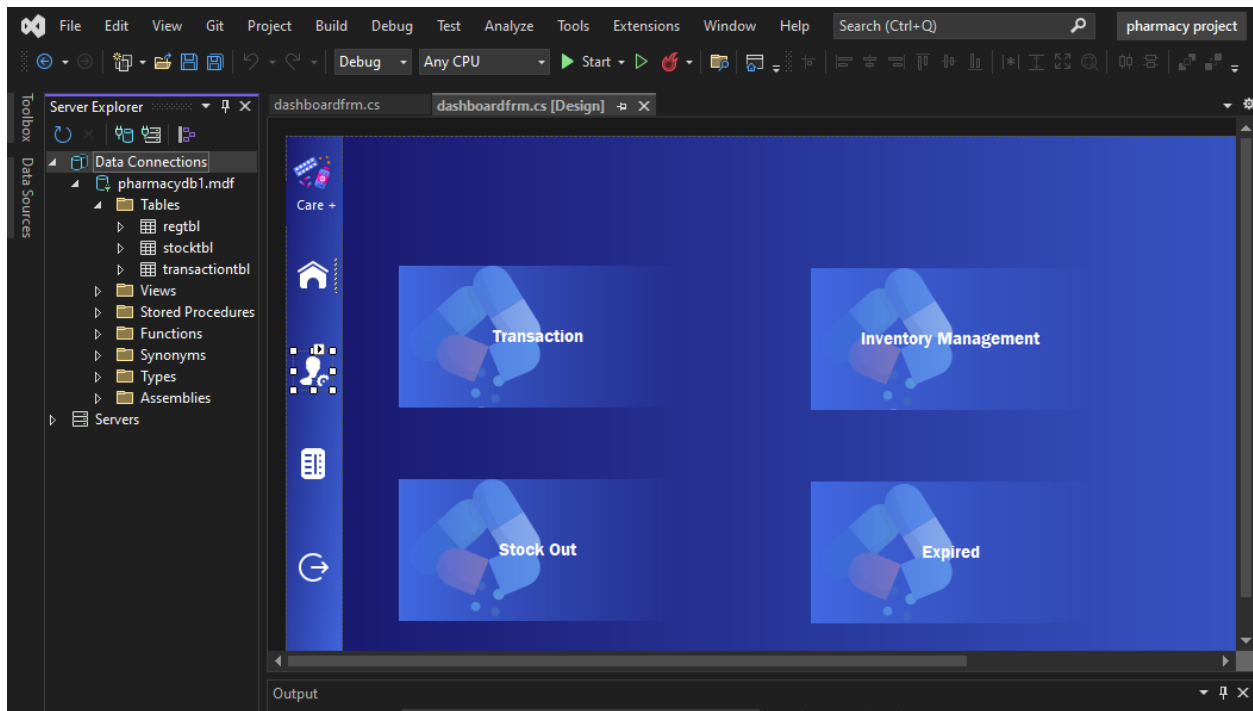

Help Desk Form

The screenshot shows a web application titled "Help Desk" with a blue header and a sidebar on the left. The sidebar contains icons for "Care +", home, user profile, and a list of items, along with a refresh button. The main content area has three columns:

- Call Us**: Features a 24-hour clock icon and a phone icon. Below the icon, it lists contact numbers: Hotline - 011-0000000, Mobile - 071-0000000, and Fax - 011-0000001.
- Ask Question**: Features a question mark icon, an envelope icon, and a phone icon. Below the icon, it states: "We ready to provide our serice via on call or remote login".
- Get Solution**: Features a target icon, a lightbulb icon, and a phone icon. Below the icon, it states: "Connect with us. We provide quick steps for slove your problems regrading to our applicaions".

- This form helps to contact the team who developed the system.

Database and Tables

- Here are the database and tables which are connecting with Care+ Pharmacy Management System.

Workload of Group Members

Name	Workload Category
W.H.P.Fernando	Both Login Form and Expired Form
M.V.D.Rajakaruna	Both Dashboard Form Help Desk Form
G.M.D.H.V.Gamlath	Transaction Form
P.S.M.Niranjana	Both Stock In and Stock Out Form
P.K.P.Sandamal	Inventory Management Form
H.P.A.Gunarathna	Both Account Setting and Summery Form

Conclusion

Here we built software application using C# Language. Previously the employees who used manual system. All the data stored in books. Because of this they had to face several problems such as security problems, spend more time for update those things. Because of these reasons we built application and hand over them. Result of this they can do their work easily and no need to worry about security. All the data stored in database automatically.
